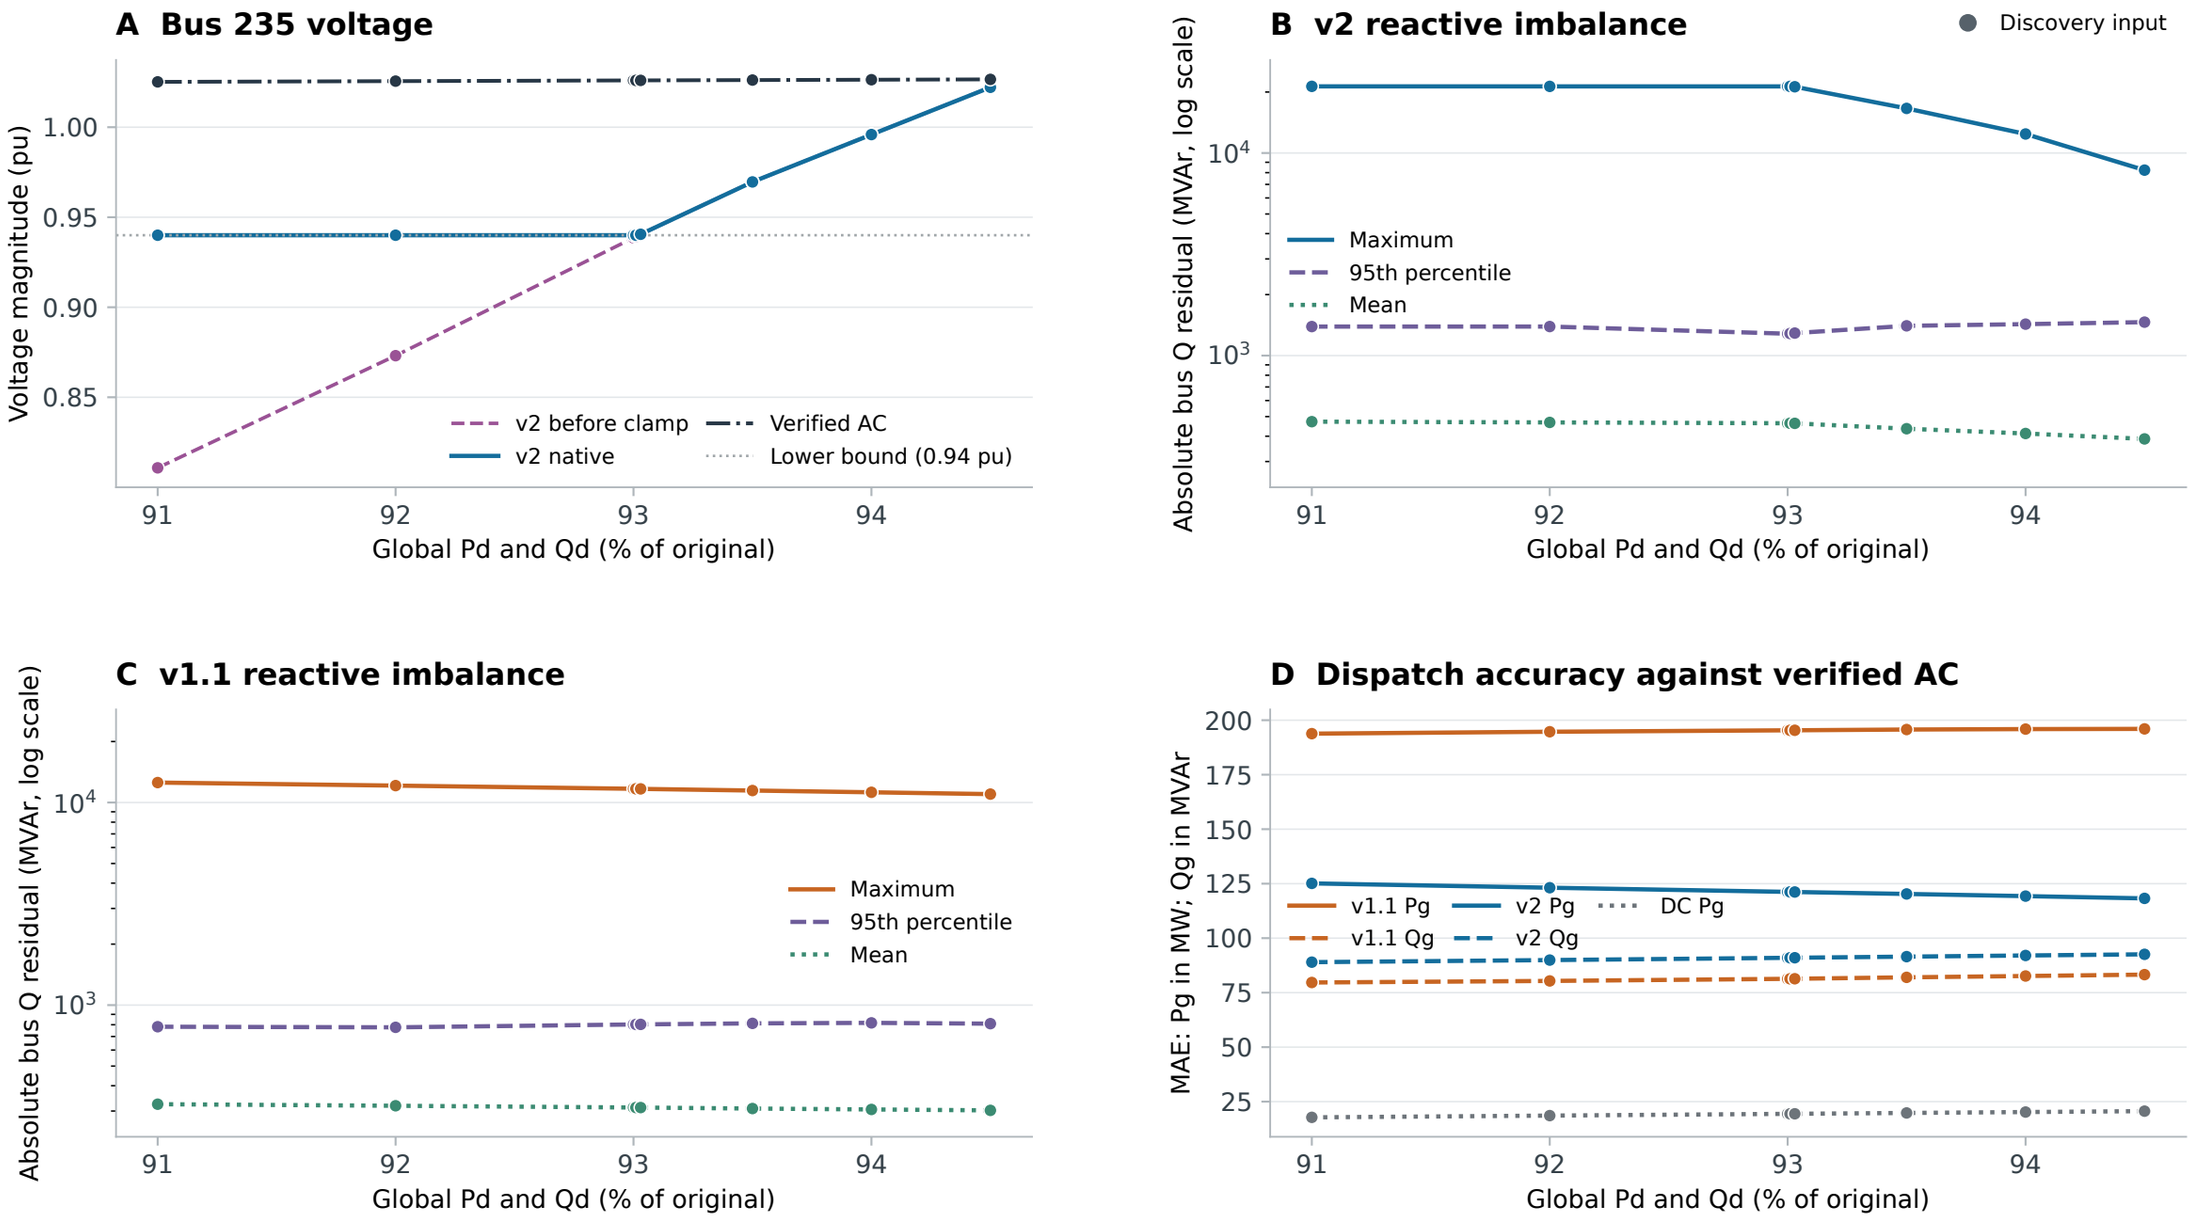
Frozen GridSFM: loading, voltage and native balance

Original case300 | 8 completed electrical inputs | verified AC references 8/8

Native joint AC feasibility: 0/16 model states pass | fixed original ordering | thermal assessment N/A



Lines connect saved samples only. Markers distinguish discovery and confirmation; no historical points are included.

Balance acceptance stays fixed at 0.001 MW/MVAr. Lower residuals or lower approximation error do not establish native feasibility.
